wherein

X and Z are independently from each other selected from linear or branched alk(en)ylene groups with 1-4 carbon atoms optionally containing an oxygen or a nitrogen atom;

Y is nothing or a selected independently of X and Z from linear or branched alk(en)ylene groups with 1-4 carbon atoms optionally containing an oxygen or a nitrogen atom;

one of  $R_1$  and  $R_2$  is a monovalent radical of hydrogen, hydroxyl or alk(en)yl groups having 1-30 carbon atoms which are linear or branched and optionally contains oxygen atoms, nitrogen atoms, sulphur atoms, and/or ester groups;

the other of R<sub>1</sub> and A<sub>2</sub> is a divalent radical with alk(en)ylene groups having 1-10 carbon aloms which groups are linear or branched and optionally contain oxygen atoms, nitrogen atoms, sulphur atoms, and/orester groups:

B is a divalent radical of aromatic, aliphatic, cycloaliphatic, and araliphatic hydrocarbon groups having 1-40 carbon atoms which groups are linear or branched and optionally contain oxygen atoms, nitrogen atoms, sulphur atoms, phosphorus atoms sulphone groups, sulphoxy groups, amine groups, amide groups, urea groups, urethane groups, and/or ester groups; ester groups;

ether groups;

amide groups;

thioester groups;

thioamide groups;

urethane groups; and

urea groups;
